

We have a **Specialist Physiotherapist**, as an alternative to an appointment with the GP, for people with a **muscle, bone or joint problem**.

The Physiotherapist can assess your condition and help you to develop a plan on how to manage it, and will liaise with the GP where required.

To help direct you to the most appropriate person we will need to ask a few questions. Please don't be offended.

The practice physiotherapist does not provide ongoing treatment, however if this is required you can be referred on.
